

West Don River Langstaff Eco Park Sanitary Infrastructure Protection Project Site I-365 (YOR-007)

Site I-365 is located along the West Don River, within Langstaff EcoPark, in the City of Vaughan (**Figure 1**). The Regional Municipality of York's Maple Collector and Maple Collector Relief Sewer follow the alignment of the watercourse, crossing the watercourse within this project area. Monitoring identified Site I-365 as "high priority" and as a result, infrastructure protection works were completed between September and October 2017. A riffle structure was installed to provide bed protection over twin sanitary line crossings. A photo of the new riffle bed protection is shown in **Figure 2** below.
